

Report

In this graph, we can see the different models of electric cars registered in the state of Washington. It is evident that the models predominantly represented in the graph belong to Tesla. It can be said that Tesla is the company that has made the most advancements in the field of electric cars, also implementing autonomous vehicles.

The other models are from various brands such as Nissan, Chevrolet, Ford, etc. While they may not have as much impact as Tesla, they still hold a certain percentage in the graph. These models are likely more affordable, but perhaps not the first choice for individuals looking to purchase from these brands.

A significant factor in why Tesla also dominates this percentage is that all Tesla vehicles are electric. Therefore, when collecting this type of information, it is inevitable for Tesla to appear in these situations.
