

REPORT

This graph shows the variation of prices between the standard value on market and selling-price caused by several factors, one of those factors is the use of cars before selling, a view was obtained using the odometer as an indicator to get the different mileage of cars and his influence on the prices.

This scatter data viz was selected to help sellers get an idea about why they sold the cars at those prices.

Is recommended to do a valuation of market to know what can do sellers to improve his selling on market without a high margin of losses, this will be a help to get a better comprehension of selling reducing losses and get earnings.

Considering the aforementioned, it's important to know the others that can affect the prices on the market to know how they can solve these fluctuations in the prices of sales.

The factors that can affect and is important to take in count and research their influence are:

How Many Trim Levels Are Usually Offered?

Depending on the manufacturer and the model there can be as few as one trim or up to six or more for some vehicles. Per Consumer Reports, In most cases, there are four or five trims. The base trim, or the entry-level model, usually doesn't have much equipment, but it is the most affordable. Each trim level after this offers more features and options until you get to the highest level trim. This usually has almost all of the features from the lower trims with some extras thrown in as well. The highest trim is the most expensive, and for most makes and models it offers features such as heated seats, leather upholstery, the best infotainment system, and all the advanced safety equipment.

Another thing to take into account is which is the better transmission ? And which prefer? the pros and cons of manual and automatic transmissions.
